- Photo Paper Printing: 600 x 1200 dpi.

Technical Support:

If these suggestions have not answered your questions, please contact Memorex Technical Support by email at techsupport@memorex.com.

Handling

Handle labels by the edge to prevent fingerprints.

Printing

- Use heavy color saturation for best results.
- Printing full color will give your discs a unique look.
- Printing full color with your text reversed out will make your font stand out even more.

Applying

- Let your label dry for at least 10 minutes after printing before applying.
- Handle labels by the edge with dry hands.
- Apply using Memorex applicator.
- If bubbles appear you can use a safety needle to let the air out. Simply poke a hole where the air bubble is and use your dry hands to smooth out the surface.

Now you are set to show off your own custom CD label. Enjoy!
